

## H2N and PGM compatibility

Since March 18<sup>th</sup>, H2N PokerMaster converter is conflicting with PGM. This means that PGM is not going to work while H2N PokerMaster converter is running. You can fix this by following this steps:

1. Update PokerGrandmaster to version 1.0.5.13 or higher.
2. Start H2N.
3. Start PokerGrandmaster.
4. Make sure that “Disable H2N PokerMaster converter” option is enabled in PokerGrandmaster General tab.

5. Restart emulators if asked for it in PokerGrandmaster Log tab.

You have to disable H2N converter even if you have Lobby only subscription of PGM. In such case PGM converter is going to work and send hands to H2N, while H2N is running.
